Submitted and in press

H. E. Fossum, A. N. Osnes and T. E. Kristiansen:
Evaluation of safety distances for storage of explosive materials using a combination of thermo-chemical calculations and CFD,
To appear in Tenth national conference on Computational Mechanics (MekIT’19), editors: B. Skallerud and H. I. Andersson.

A. N. Osnes, M. Vartdal, M. G. Omang and B. A. P. Reif:
Numerical investigation of shock wave particle cloud interaction in cylindrical geometries,
To appear in Tenth national conference on Computational Mechanics (MekIT’19), editors: B. Skallerud and H. I. Andersson.

A. N. Osnes, M. Vartdal, M. G. Omang and B. A. P. Reif:
Particle-resolved simulations of shock-induced flow through particle clouds at different Reynolds numbers,
Submitted to Physical Review Fluids.

J. Aa Tørnes, T. Vik and T. T. Kjellstrøm:
Leakage rate of the nerve agent tabun from sea-dumped munition,
Submitted to Marine Environmental Research.

C. E. Wasberg, Ø. Andreassen, T. Gjesdal, P. M. Greni, A. Helgeland and M. Vartdal:
Modelling of flow noise in towed antennas,
Submitted to Ocean Engineering.

J. Yuan, A. Mishra, G. Brereton, G. Iaccarino and M. Vartdal:
Single-point structure tensors in turbulent channel flows with smooth and wavy walls,
Submitted to Physics of Fluids.

E. Åkervik and M. Vartdal:
The role of wave kinematics in turbulent flow over waves,

2019

A. N. Osnes, M. Vartdal, M. G. Omang and B. A. P. Reif:
Computational analysis of shock-induced flow through stationary particle clouds,

M. Vartdal and A. N. Osnes:
Linear motion of multiple superposed viscous fluids,

2018

A. N. Osnes, M. Vartdal and B. A. Pettersson Reif:
Numerical simulation of particle jet formation induced by shock wave acceleration in a Hele-Shaw cell,
M. Vartdal and A. N. Osnes:  
Using particle-resolved LES to improve Eulerian-Lagrangian modeling of shock wave particle cloud interaction,  

J. Yuan, G. Brereton, G. Iaccarino, A. A. Mishra and M. Vartdal:  
Single-point structure tensors in rough-wall turbulent channel flow,  

2017

E. M. M. Wingstedt, A. N. Osnes, E. Åkervik, D. Eriksson and B. A. Pettersson Reif:  
Large-eddy simulation of dense gas dispersion over a simplified urban area,  

E. M. M. Wingstedt, M. Vartdal and B. A. Pettersson Reif:  
Large-eddy simulations of dense-gas dispersion within a high-Reynolds number turbulent boundary layer,  
Physics of Fluids (29) 9, 095103 (2017).

2016

A. Brambilla, P. Angelelli, Ø. Andreassen and H. Hauser:  
Comparative visualization of multiple time surfaces by planar surface reformation,  

M. Vartdal:  
Computing turbulence structure tensors in plane channel flow,  

2015

D. Eriksson, A. N. Osnes and E. Åkervik:  
Neutrally Buoyant Gas Dispersion Within an Urban Street Canyon,  

E. M. M. Wingstedt, H. E. Fossum, B. A. P. Reif and J. Werne:  
Anisotropy and shear-layer edge dynamics of statistically unsteady, stratified turbulence,  

2014

N. Abdul-Karim, C. S. Blackman, P. P. Gill, E. M. M. Wingstedt, B. A. P. Reif:  
Post-blast explosive residue – A review of formation and dispersion theories and experimental
research.

A. Bøckmann, M. Vartdal:
A gradient augmented level set method for unstructured grids,

A. Helgeland, K. A. Mardal, V. Haughton and B. A. P. Reif:
Numerical simulations of the pulsating flow of cerebrospinal fluid flow in the cervical spinal canal of a Chiari patient,

2013

A. Brambilla, Ø. Andreassen and H. Hauser:
Integrated Multi-aspect Visualization of 3D Fluid Flows,

H. E. Fossum, E. M. M. Wingstedt, B. A. P. Reif:
A model for the viscous dissipation rate in stably stratified, sheared turbulence,

S. O. Linge, K.-A. Mardal, V. Haughton and A. Helgeland:
Simulating CSF Flow Dynamics in the Normal and the Chiari I Subarachnoid Space during Rest and Exertion,

M. Vartdal and A. Bockmann:
An oriented particle level set method based on surface coordinates,

2012

Comparison of CFD and operational dispersion models in an urban-like environment,

T. Elboth, B. A. Pettersson Reif, Ø. Andreassen, and M Martell:
Flow noise reduction from superhydrophobic surfaces,
Geophysics 77 (1), P1-P10 (2012).

H. Fossum, B. A. Pettersson Reif, M. Tutkun and T. Gjesdal:
On the Use of Computational Fluid Dynamics to Investigate Aerosol Dispersion in an Industrial Environment: A Case Study,

2011
J. M. Blatny, H. Fossum, J. Ho, M. Tutkun, G. Skogan, Ø. Andreassen, E. M. Fykse, V. Waagen and B. A. Pettersson Reif:  
Dispersion of Legionella-containing aerosols from a biological treatment plant, Norway,  

J. M. Blatny, J. S. Olsen, Ø, Andreassen, V. Waagen and B. A. P. Reif:  
Tracking Legionella in air generated from a biological treatment plant - A case study of the outbreak of legionellosis in Norway,  
Proceedings of SPIE, the International Society for Optical Engineering. ISSN 0277-786X, 8018 (2011).

Double Large Field Stereoscopic PIV in a High Reynolds Number Turbulent Boundary Layer,  
Experiments in Fluids, 50 (1), 1-12 (2011).

The WALLTURB joined experiment to assess the large scale structures in a high Reynolds number turbulent boundary layer,  

P. A. Durbin and B. A. Pettersson Reif:  
Statistical Theory and Modeling for Turbulent Flows,  

T. Elboth, B. A. P. Reif, Ø. Andreassen and M. B. Martell:  
Reducing high Reynolds number hydroacoustic noise using superhydrophobic coating,  

H. E. Fossum, B. A. Pettersson Reif and G. Skogan:  
Flow Patterns and Aerosol Dispersion inside an Aerosol Test Chamber,  

H. E. Fossum, M. Tutkun, B. A. Pettersson Reif and Ø. Andreassen:  
Modeling the dispersion and transport of aerosols emitted from industrial facility during 2005 and 2008 outbreaks of Legionnaire's disease in Norway,  

J.-M. Foucaut, S. Coudert, M. Stanislas, J. Delville, M. Tutkun and W. K. George:  
Spatial Correlation from the SPIV database of the WALLTURB Experiment,  

M. Fredbo and M. Tutkun:  
Verification of Markovian Properties of Turbulent Boundary Layer at High Reynolds Number,  
W. K. George and M. Tutkun:
The Mesolayer and Reynolds Number Dependencies of Boundary Layer Turbulence,
in Progress in Wall Turbulence: Understanding and Modeling of Wall Turbulence, ERCOFTAC

S. Grafsrønningen, A. Jensen and B. A. Pettersson Reif:
PIV investigation of buoyant plume from natural convection heat transfer above a horizontal heated
cylinder,

A. Helgeland:
VoluViz: a multi-field volume visualization framework for three-dimensional data analysis,
in Sixth national conference on Computational Mechanics (MekIT’11), editors: B. Skallerud and H.

S. Linge, V. Haughton, A. E. Løvgren, K.-A. Mardal, A. Helgeland and H. P. Langtangen:
Effect of Tonsillar Herniation on Cyclic CSF Flow Studied with Computational Flow Analysis,

M. Mortensen, H. P. Langtangen and J. Myre:
CBC.RANS - a new flexible, programmable software framework for computational fluid dynamics,
in Sixth national conference on Computational Mechanics (MekIT’11), editors: B. Skallerud and H.

M. Mortensen, H. P. Langtangen and G. N. Wells:
A FEniCS-based programming framework for modeling turbulent flow by the Reynolds-averaged
Navier-Stokes equations,
Advances in Water Resources 34 (9), 1082-1101 (2011).

M. Mortensen, K. A. Mardal and H. P. Langtangen:
Simulations of transitional flows,
in Automated Solution of Differential Equations by the Finite Element Method: The FEniCS Book,
editors: A. Logg, K.-A. Mardal and G. N. Wells, Lecture Notes in Computational Science and

A. Pobitzer, M. Tutkun, Ø. Andreassen, R. Fuchs, R. Peikert and H. Hauser:
Energy-scale Aware Feature Extraction for Flow Visualization,

M. Stanislas, J.-M. Foucaut, S. Coudert, M. Tutkun, W. K. George and J. Delville:
Calibration of the WALLTURB Experiment Hot-Wire Rake Using PIV,
in Progress in Wall Turbulence: Understanding and Modeling of Wall Turbulence, ERCOFTAC

Two-Point Correlations and POD Analysis of the WALLTURB Experiment using the Hot-Wire
Rake Database,
in Progress in Wall Turbulence: Understanding and Modeling of Wall Turbulence, ERCOFTAC

K. Valen-Sendstad, A. Logg, K.-A. Mardal, H. Narayanan and M. Mortensen:
A comparison of some common finite element schemes for the incompressible Navier-Stokes equations,
in *Automated Solution of Differential Equations by the Finite Element Method: The FEniCS Book*,

K. Valen-Sendstad, K.-A. Mardal, M. Mortensen, B. A. Pettersson Reif and H. P. Langtangen: On The Complexity of Stationary Flow in Patient-Specific Aneurysms,

K. Valen-Sendstad, M. Mortensen, K.-A. Mardal, B. A. Pettersson Reif, and H. P. Langtangen: Investigations of transitional flows using image based hemodynamics,

T. Vik and B. A. Pettersson Reif: Large Eddy Simulations of the release of liquified Chlorine from a pressurized tank into the atmosphere,

T. Vik and B. A. Pettersson Reif: *Modeling the evaporation from a thin liquid surface beneath a turbulent boundary layer*,

C. N. Vooren and C. E. Wasberg: A numerical study of transverse curvature effects and anisotropy in wall-bounded turbulence,

C. E. Wasberg: *Post-processing of marginally resolved spectral element data*,

E. M. M. Wingstedt, T. Vik and B. A. Pettersson Reif: Numerical simulation of non-neutral gas dispersion in a complex urban area,

2010

T. Elboth, D. Lilja, B. A. Pettersson Reif and Ø. Andreassen: *Investigation of flow and flow noise around a seismic streamer cable*,
*Geophysics*, 75 (1), Q1-Q9 (2010).
T. Elboth, I. V. Presterud and D. Hermansen:
Time-frequency seismic data de-noising,

M. Endregard, B.A.P. Reif, T. Vik and O. Busmundrud:
Consequence assessment of indoor dispersion of sarin - A hypothetical scenario,
